INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference SF-983	FOR FURTHER ACTION See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)					
International application No. PCT/JP2003/016588	International filing date 24 December 200		Priority date (day/month/year) 04 April 2003 (04.04.2003)			
International Patent Classification (IPC) or national classification and IPC C08F 8/00, G11B 7/24, H01L 21/56, G03F 7/039, C09D 123/26, C09J 123/26, C08J 5/00, G02B 1/04 // C08L 45:00						
Applicant SOKEN CHEMICAL & ENGINEERING CO., LTD.						
 This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36. This REPORT consists of a total of 5 sheets, including this cover sheet. 						
This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).						
These annexes consist of a total of sheets.						
3. This report contains indications relating to the following items:						
I Basis of the report						
Π Priority						
III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability						
IV Lack of unity of invention						
V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement						
VI Certain documents cited						
VII Certain defects in t	he international application	on				
VIII Certain observations on the international application						
Date of submission of the demand		Date of completion	of this report			
16 May 2004 (16.05.2004)		10 D	ecember 2004 (10.12.2004)			
Name and mailing address of the IPEA/JP		Authorized officer				
Facsimile No.		Telephone No.

2. Citations and explanations

Document 1: WO, 98/18837, A (Nippon Zeon Co., Ltd.), 07 May, 1998, Claims, pages 37-38, page 74. Examples 10, 11, 13, 20 & EP, 936230, A1.

Document 2: JP, 6-172423, A (Idemitsu Kosan Co., Ltd.), 21 June, 1994, Claims, Par. Nos. [0079]-[0085] (Family: none).

Document 3: JP, 10-7736, A (Mitsui Chemicals, Inc.), 13 January, 1998, Claims, Par. Nos. [0005], [0217] to [0231] (Family: none).

(Claim 1)

The invention of claim 1 does not appear to possess novelty or involve an inventive step.

As for feature of the invention of claim 1: "chemically modifying by adding a modifying agent compound having a functional group and a hydrogen-donating group or a functional group and a halogenated alkyl group to a base polymer of a cycloolefin copolymer having an ethylene chain", the aforementioned documents 1-3 described in the ISR describe graft modification and introduction of functional groups (see indicated place in each document). As for the amount of introduced functional group described in the invention of claim 1 as "adding a functional group within a range of 20-90%," the aforementioned documents 1-3 described in the ISR describe the variable quantity thereof and those ranges overlap (see document 1, page 35, document 2, Par. No. [0079], document 3, Par. No. [0231]).

The aforementioned documents 1-3 described in the ISR do not describe the distribution correlation factor value of the invention of claim 1, but structural difference in the polymer modified by this numerical value cannot be confirmed. (Claim 2)

The invention of claim 2 does not appear to possess novelty or involve an inventive step.

The invention of claim 2 restricts the invention of claim 1 with respect to the functional group, but this feature is described in the aforementioned documents 1-3 described in the ISR (see indicated places in each document).

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/JP03/16588

VIII Certain observations on the international at	micotion

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claim 1 describes the distribution correlation factor value, but the technological meaning thereof as a degree of homogeneity is not described and the meaning thereof in terms of polymer structure is not clear.

International application No.

PCT/JP03/16588

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of Box V:

(Claims 3-11, 16-18)

The invention of claims 3-11, 16-18 do not appear to possess novelty or involve an inventive step.

The invention of claim 3 restricts the invention of claim 1 with respect to the functional group, but this feature is described in the aforementioned document 1 described in the ISR (see the indicated places).

The invention of claim 4 is the invention relating to the manufacturing method, but this is described in the aforementioned document 1 described in the ISR (see the indicated places).

The inventions of claims 5-10 restrict the invention of claim 1 with respect to the functional group and peroxide compound, but this feature is described is the aforementioned document 1 described in the ISR (see the indicated places).

Further, as mentioned hereinabove, the distribution correlation factor value is not described in the aforementioned documents 1-3 described in the ISR, but structural difference in the polymer modified by this numerical value cannot be confirmed.

The inventions of claims 11, 16-18 relate to photoresist resin compositions, resins for optical components, resins for recording medium substrate, and resins for IC package sealing, but those applications are described in the aforementioned document 1 described in the ISR (see the indicated place).

(Claims 12-15, 19)

The invention of claims 12-15 and 19 appear to possess novelty and involve an inventive step. The aforementioned documents cited in the ISR do not describe the adhesive, resin for a low-permeability film, resin for a protective film, resin for overcoating, and resin for a light conduction plate of the invention of claims 12-15 and 19 and this invention could not have been easily created by a person skilled in the art.
